Document defaults

This page sets a default width and gap in its YAML header:

```yaml
wrapped:
  width: 30%
  gap: 1.5em
```

Its figures set no `width` or `wrap-gap` of their own:

```
![Mean ratings by condition.](ratings.png){#fig-ratings .wrap-right}
```

Result

Figure 1 takes the page's default width of 30% and its gap of `1.5em`. Without the `wrapped` key, it would take the built-in 40% and `1em`.

The defaults save you from repeating the same values on every figure. A figure's own `width` or `wrap-gap` attribute still comes first.

In HTML, the `wrapped` key also takes a `breakpoint`. In a window that wide or narrower, figures stop floating.

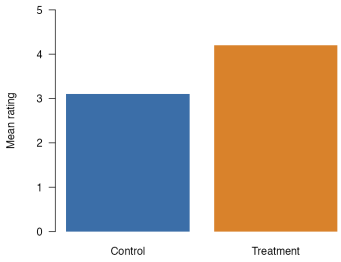

Figure 1: Mean ratings by condition.

Next

A heading is not a paragraph, so wrapping stops before it.
